Overview *(Note: the holiday weekend may have introduced reporting anomalies in COVID-19 data this week)*

New confirmed COVID-19 infections have decreased from last week's high, **down 2,115 cases**, with **every Vermont county** reporting lower rates than the previous week (slides 5 & 25). PCR testing volume remains high (6), with Vermont's per capita testing **highest in the United States** this week (15).

New England and other jurisdictions hit early with Omicron have reported case decreases for more than a week (44-49). Boston's wastewater testing is also showing **early signs of declining viral activity** (50).

With the arrival of Omicron, Vermont continues to see more breakthrough cases (9), but risk of hospitalization (10) and death (11) remains low for those fully vaccinated and boosted. Vermont has now surpassed 500 COVID-19 deaths (36).

COVID-19 **hospitalizations have reached a new record** in Vermont, with 122 patients in the hospital for the virus (29). Hospitalizations have increased 18% over the last week and ICU numbers have climbed 34% (29-30). A majority of those in both the hospital and ICU are **not fully vaccinated**. Availability of hospital beds has decreased this week with Vermont hospitals today reporting 27 open medical-surgical beds & 14 ICU beds (32).

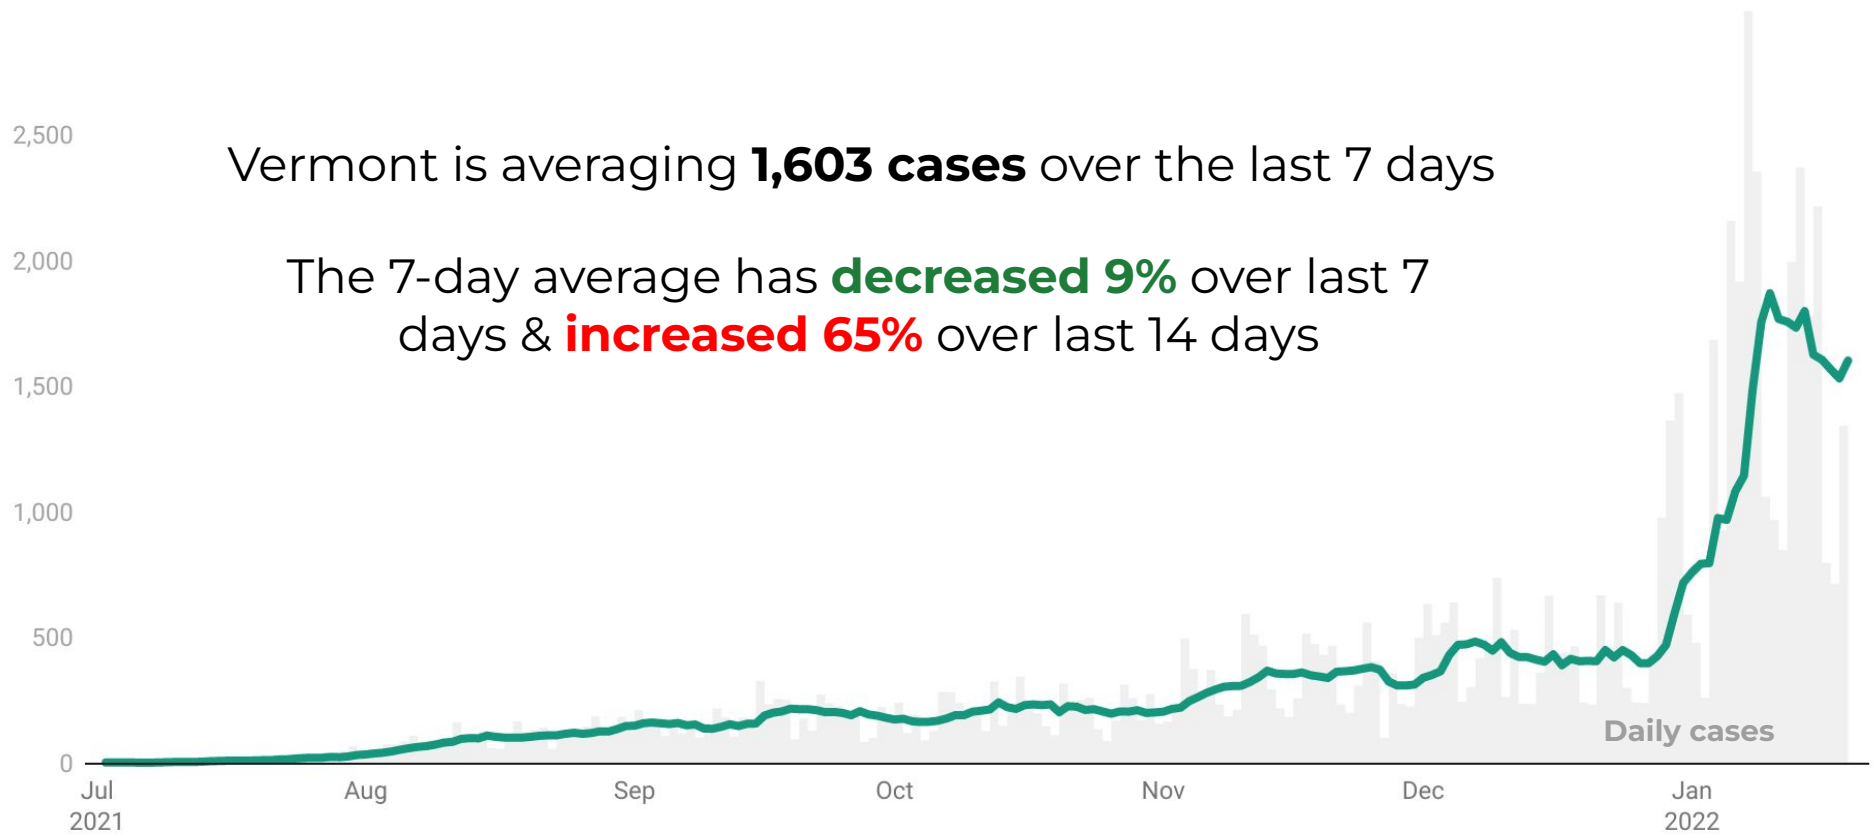

Reported influenza hospitalizations in Vermont remain very low (31). Cases in LTCFs have risen sharply this week (26), and colleges are now also reporting elevated cases as the spring semester begins (27).

Vermont COVID-19 cases are expected to **slow and possibly decline** in the coming weeks as the Omicron surge possibly subsides (23). Hospitalizations and deaths are expected to lag behind improving case trends (24).
